Smart energy solutions

INTEGRATE RENEWABLES AS

LEADING ENERGY SYSTEM DEVELOPER I NORWAY

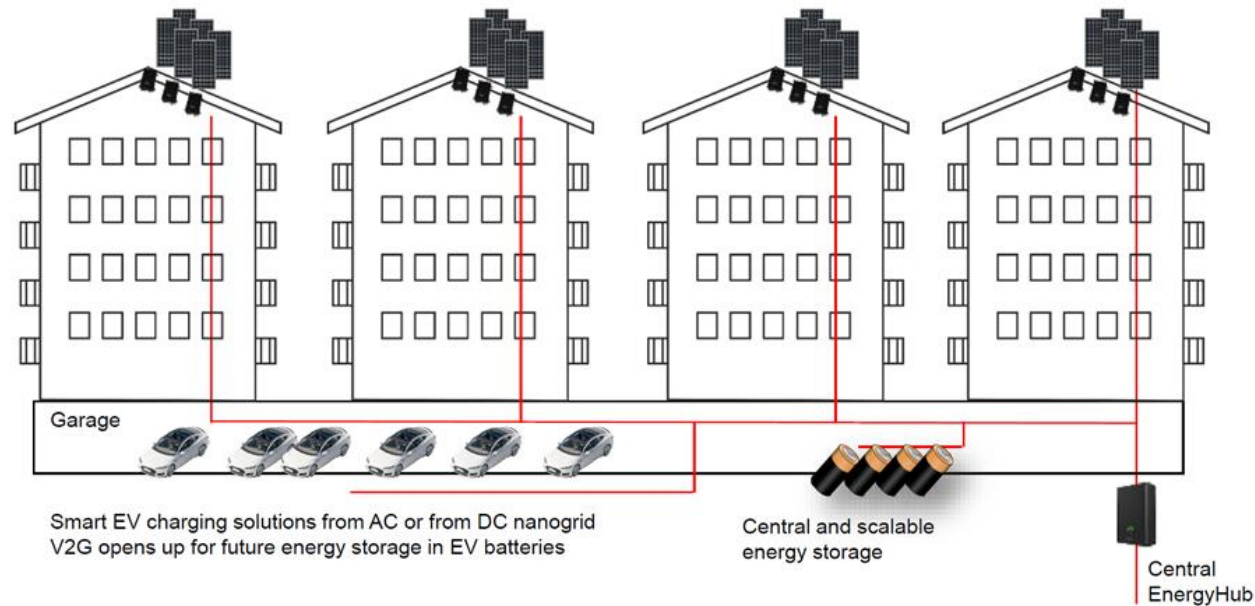

Office in Godesetdalen, Stavanger

- Established 2014
- 6 employes ++
- Developer, adviser and installer
- Developing renewable energys ystems based on;
 - Solar Energy
 - Wind Energy
 - Energy storage and contol systems

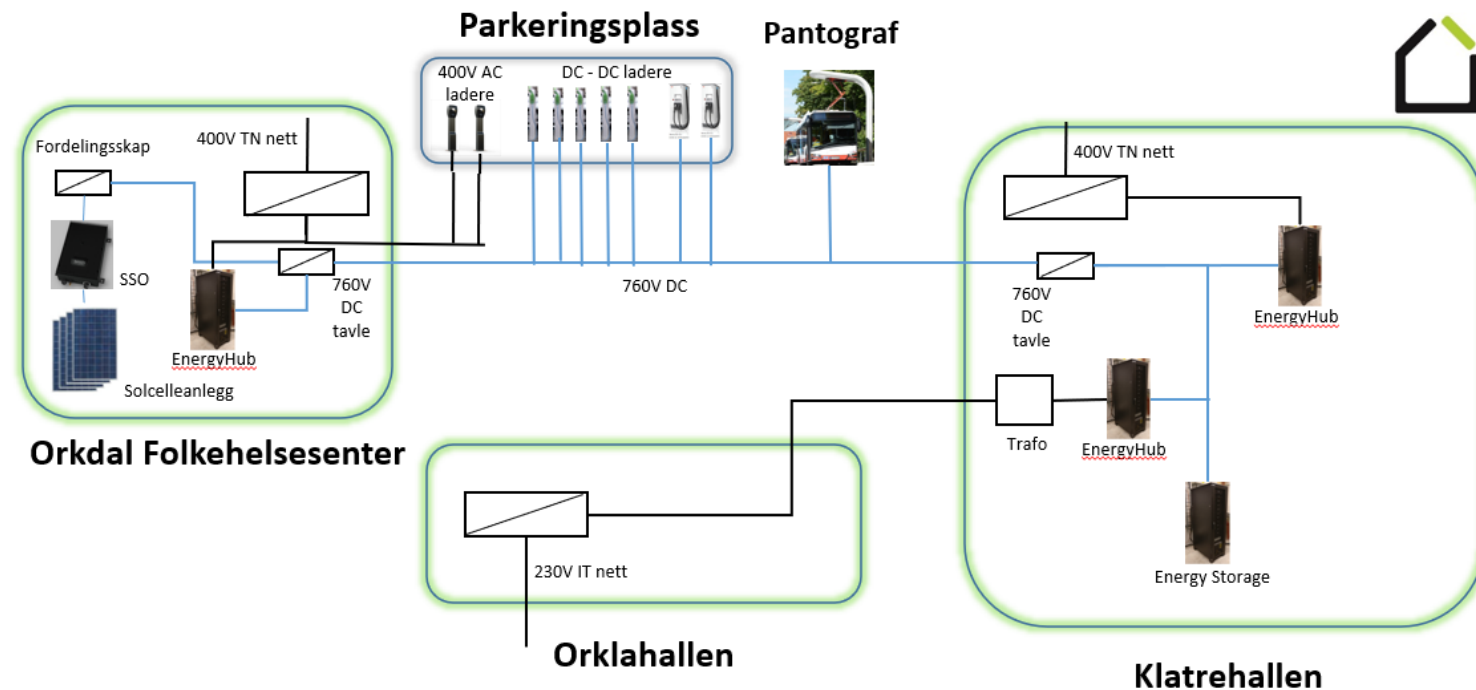

Right combination of solar and batteries -gives better results

EnergyHub central control

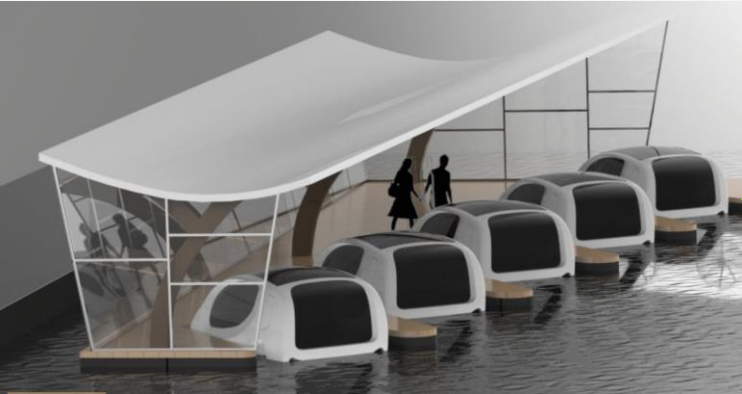

The complete area is **optimized** by **integrating several buildings** with **several solar plants** into one **centralized energy storage system**, in addition to the **heating and cooling system**.

This opens the opportunity for **energy flow between the buildings**, performing **active peak-shaving** from the major loads inside the building, and the parking lot, in addition to be able to **use all solar energy** produced locally, without selling surplus energy to the grid.

#POWER AS A SERVICE

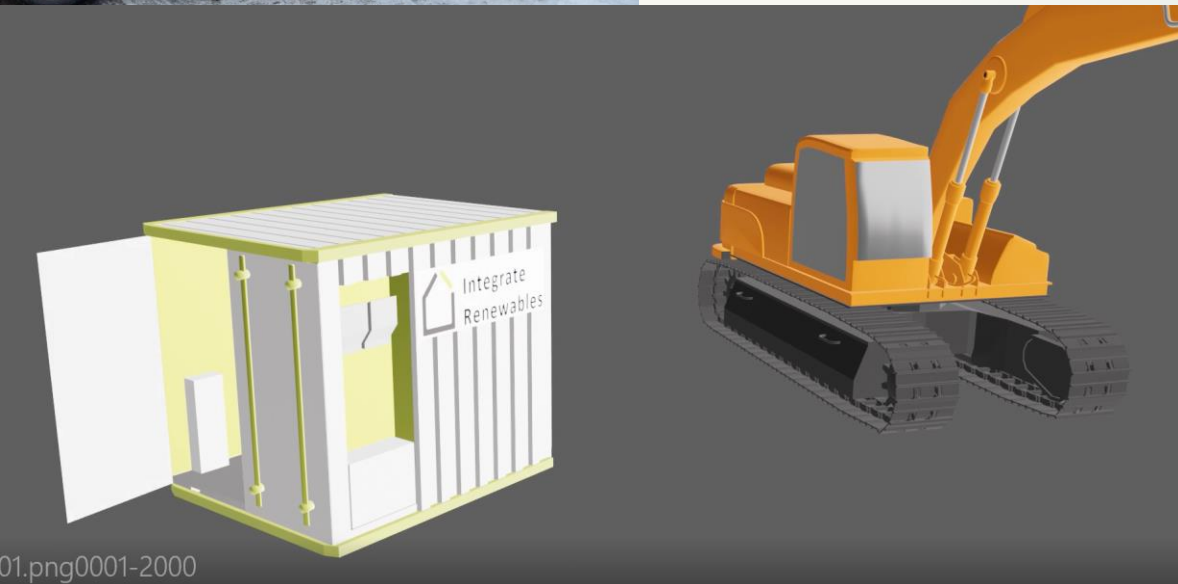

Transformation to a low-carbon society

-We provide to you: Power as a service

You have the needs;
-We develop the solutions!
